

Maitri – AI Technician API Integration

Complete API Documentation | Registration + Application Save + Document Upload + Payment

Application Type ID: 6

1. Introduction

This document defines the complete API integration flow for **AI Technician** in the Maitri system. There are four sequential API operations. The first API registers the user and creates the application header. The second saves the AI Technician application details. The third uploads the supporting documents. The fourth saves the payment information. All four operations use the same Maitri API endpoint. **For AI Technician, application_type_id is always 6.**

2. Common API Configuration

Item	Details
API URL	http://103.19.138.165:8087/api/maitri/save/
Method	POST
Authentication	Basic Authentication
Username	Maitri_API
Password	Maitri_API
Application	AI Technician
application_type_id	6 (always)
Content-Type	application/json for APIs 1, 2 and 4; multipart/form-data for API 3

3. Complete End-to-End Flow

Step	API / Operation	Important Output / Input
1	MaitriUserRegistration	Creates user/application header. Returns mbbra_userid, mbbra_app_head_id and doc_no.
2	AITechSave	Saves application details. Returns pi_ai_tech_dtl_id.
3	AITechSaveDoc	Uploads supporting documents. Returns pi_ai_tech_doc_id.
4	AITechSavePayment	Saves payment information. Returns pi_mbbra_appl_pay_id.

Data flow: Registration IDs → Application Save → AI Technician Detail ID → Document Save → Payment Save.

4. API 1 – AI Technician User Registration

Purpose: Register the AI Technician user and create the application header. This API is called when the user clicks the **AI Technician** menu.

keyWord: MaitriUserRegistration

Request

```
{
  "keyword": "MaitriUserRegistration",
  "payload": {
    "user_name": "Rahul Khade",
    "user_name_ol": null,
    "user_address": "Pune",
    "mobile_no": "9075100557",
    "emailid": "rahulkhade@gmail.com",
    "user_image": null,
    "login_name": "Rahul1918",
    "status": "A",
    "district_name": "Pune",
    "district": "Pune",
    "taluka": "Haveli",
    "gender": "F",
    "education": "Post Graduate",
    "date_of_qualification": "2018-07-01",
    "date_of_birth": "1992-03-20",
    "profile_image": null,
    "bank_account_holder_name": "Sunita Deshmukh",
    "bank_name": "HDFC",
    "branch_name": "Pune Camp",
    "ifsc_code": "HDFC00012305",
    "account_no": "08765432109",
    "ndlm_user_name": null,
    "ndlm_password": null,
    "district_id": 512,
    "maitri_userid": 5002,
    "sub_organization_id": 1,
    "enter_user_id": 1,
    "enter_desc": "Test user created through Maitri API",
    "pass_flag": "N",
    "application_type_id": "6"
  }
}
```

Response

```
{
  "message": "success",
  "data": {
    "keyword": "MaitriUserRegistration",
    "mbbra_userid": 15533,
    "data": [{
      "mbbra_app_head_id": 26062,
      "doc_no": "AIT/2026/09/4",
      "application_type_id": 6,
      "create_application_flag": "Y"
    }]
  },
  "po_error": null,
  "status_code": 200
}
```

Values required by subsequent APIs

Registration Response	Example Value	Used As
mbbra_userid	15533	User ID for AITechSave and payment
mbbra_app_head_id	26062	Application header ID
doc_no	AIT/2026/09/4	Application document number
application_type_id	6	Always 6 for AI Technician

5. API 2 – AI Technician Application Save (AITechSave)

Purpose: Save the AI Technician application details. The values **mbbra_app_head_id**, **mbbra_userid**, **doc_no**, and **application_type_id** are linked to the registration API response.

keyWord: AITechSave

Request

```
{
  "keyword": "AITechSave",
  "payload": {
    "detail_table_id": 0,
    "mbbra_app_head_id": 26062,
    "mbbra_userid": 15533,
    "doc_no": "AIT/2026/09/4",
    "applicant_name": "Akash",
    "uidai_number": "878899798789",
    "pan_number": "NSKSJ1234E",
    "address": "Nagpur",
    "gender": "M",
    "date_of_birth": "2000-08-28",
    "state_id": 269,
    "district_id": 569,
    "taluka_id": 10488,
    "application_type_id": 6,
    "institution_type_id": 1222,
    "ownership_type": 1228,
    "education": 8,
    "date_of_qualification": "2020-08-28",
    "is_draft": 0,
    "check_terms": 1,
    "sub_organization_id": 1,
    "full_name": "Akash",
    "full_address": "Nagpur",
    "contact": "8010614378",
    "email": "akash@example.com"
  }
}
```

Response

```
{
  "message": "success",
  "data": {
    "keyword": "AITechSave",
    "success": true,
    "data": [{
      "data": [{
        "pi_ai_tech_dtl_id": 20654,
        "pi_common_dtl_id": 20654,
        "pi_opid": "N276545",
        "pi_error": "success"
      }],
      "success": true
    }]
  },
  "po_error": null,
  "status_code": 200
}
```

Important: The response field **pi_ai_tech_dtl_id** becomes **ai_tech_dtl_id** in API 3 and **detail_id** in API 4.

6. API 3 – AI Technician Document Save (AITechSaveDoc)

Purpose: Upload and save the supporting documents for the AI Technician application. This API uses the same URL but the request must be sent as **multipart/form-data**. The screenshot supplied for this API shows the text fields and file fields listed below.

keyWord: AITechSaveDoc

Request Parameters

Parameter	Type	Value / Source
sub_organization_id	Text	1
mbbra_app_head_id	Text	API 1: mbbra_app_head_id
mbbra_userid	Text	API 1: mbbra_userid
ai_tech_dtl_id	Text	API 2: pi_ai_tech_dtl_id
application_type_id	Text	6
ai_tech_doc_id	Text	0 for new document
aadhar_card	File	Uploaded file
pan_card	File	Uploaded file
applicant_photograph	File	Uploaded file
education_proof	File	Uploaded file
experience_certificate	File	Uploaded file
facility_coldchain_details	File	Uploaded file
registration_certificate	File	Uploaded file
sperm_motility_certificate	File	Uploaded file
ndlm_status_certificate	File	Uploaded file
semen_record_maintenance	File	Uploaded file
working_area_declaration	File	Uploaded file
undertaking	File	Uploaded file
bank_details_proof	File	Uploaded file
keyWord	Text	AITechSaveDoc

Response

```
{
  "message": "success",
  "data": {
    "keyWord": "AITechSaveDoc",
    "success": true,
    "data": [{
      "data": [{
        "pi_ai_tech_doc_id": 95,
        "pi_opid": "N276557",
        "pi_error": "success"
      }],
      "success": true
    }]
  },
  "po_error": null,
  "status_code": 200
}
```

Important: API 3 generates **pi_ai_tech_doc_id**. This document ID is returned after the supporting documents are successfully saved.

7. API 4 – AI Technician Payment Save (AITechSavePayment)

Purpose: Save payment information against the AI Technician application. This API uses the same endpoint and Basic Authentication as the other APIs.

keyWord: AITechSavePayment

Request

```
{
  "keyWord": "AITechSavePayment",
  "payload": {
    "mbbra_appl_pay_id": 0,
    "operation_date": "2026-08-31",
    "sub_organization_id": 1,
    "mbbra_user_id": 15533,
    "application_type_id": 6,
    "mbbra_app_head_id": 26062,
    "detail_id": 20654,
    "amount": 1,
    "payment_for": 1,
    "certificate_id": 6,
    "payment_method": "Online",
    "status": 1,
    "failure_reason": null,
    "payment_datetime": "2026-08-29T14:30:00",
    "customer_name": "Akash",
    "customer_email": "akash@example.com",
    "receipt_number": "TEST-RCPT-001",
    "response": "{\"success\":true,\"message\":\"Test payment successful\"}",
    "order_id": "test_order_001",
    "razorpay_order_id": "test_order_001",
    "razorpay_payment_id": "test_payment_001",
    "razorpay_signature": "test_signature_001",
    "request": "{\"amount\":1,\"application_id\":9811,\"receipt\":\"TEST-RCPT-001\"}",
    "enter_user_id": 15518,
    "enter_desc": "Payment saved through Maitri API",
    "pass_flag": "Y",
    "opid": "",
    "error": ""
  }
}
```

Response

```
{
  "message": "success",
  "data": {
    "keyWord": "AITechSavePayment",
    "success": true,
    "data": [{
      "data": [{
        "pi_mbbra_appl_pay_id": 269,
        "pi_opid": "N276559",
        "pi_error": "success"
      }],
      "success": true
    }],
    "po_error": null,
    "status_code": 200
  }
}
```

Important Payment Parameters

Parameter	Description
mbbra_appl_pay_id	Payment record ID; 0 is used for a new payment record.
operation_date	Payment/operation date in YYYY-MM-DD format.
mbbra_user_id	Registration API mbbra_userid.
application_type_id	Always 6 for AI Technician.
mbbra_app_head_id	Registration API mbbra_app_head_id.
detail_id	AITechSave pi_ai_tech_dtl_id.
amount	Payment amount.
payment_for	Payment purpose/type identifier.
certificate_id	Certificate identifier; supplied example uses 6.
payment_method	Payment method, e.g. Online.
status	Payment status flag; supplied successful example uses 1.
failure_reason	Failure reason; null for successful payment.
payment_datetime	Payment timestamp.
customer_name / customer_email	Applicant/customer details.
receipt_number	Payment receipt/reference number.
order_id	Application/payment order reference.
razorpay_order_id	Razorpay order ID.
razorpay_payment_id	Razorpay payment ID.
razorpay_signature	Razorpay payment signature.

Parameter	Description
pass_flag	Processing flag; supplied successful example uses Y.

8. API-to-API Parameter Mapping

The following table shows exactly how values generated by one API are passed into the next API. Generated identifiers should be taken from the current API response and should not be hard-coded.

Source API	Response Field	Next API	Request Field
MaitriUserRegistration	mbbra_userid	AITechSave	mbbra_userid
MaitriUserRegistration	mbbra_app_head_id	AITechSave	mbbra_app_head_id
MaitriUserRegistration	doc_no	AITechSave	doc_no
MaitriUserRegistration	application_type_id	AITechSave	application_type_id
AITechSave	pi_ai_tech_dtl_id	AITechSaveDoc	ai_tech_dtl_id
MaitriUserRegistration	mbbra_userid	AITechSavePayment	mbbra_user_id
MaitriUserRegistration	mbbra_app_head_id	AITechSavePayment	mbbra_app_head_id
AITechSave	pi_ai_tech_dtl_id	AITechSavePayment	detail_id
Fixed value	6	All applicable APIs	application_type_id

9. Sample End-to-End Values

Identifier	Value	Generated By
mbbra_userid	15533	MaitriUserRegistration
mbbra_app_head_id	26062	MaitriUserRegistration
doc_no	AIT/2026/09/4	MaitriUserRegistration
application_type_id	6	Fixed for AI Technician
pi_ai_tech_dtl_id	20654	AITechSave
pi_ai_tech_doc_id	95	AITechSaveDoc
pi_mbbra_appl_pay_id	269	AITechSavePayment
pi_opid (Save)	N276545	AITechSave
pi_opid (Document)	N276557	AITechSaveDoc
pi_opid (Payment)	N276559	AITechSavePayment

10. Success and Error Handling

Response Field	Successful Example / Meaning
message	success
success	true where provided by the API
status_code	200
po_error	null on success
pi_error	success on successful processing

Recommended integration behavior: Continue to the next API only after the current API returns a successful result. If an API returns an error, stop the dependent operation and handle/display the error before continuing.

11. Important Integration Notes

1. All four APIs use the same endpoint: <http://103.19.138.165:8087/api/maitri/save/>.
2. Use POST and Basic Authentication with Maitri_API / Maitri_API.
3. API 1 is triggered when the user clicks the AI Technician menu.
4. API 1 must successfully create the user/application before API 2 is called.
5. Use the generated mbbra_userid, mbbra_app_head_id and doc_no from API 1 for the current application.
6. API 2 generates pi_ai_tech_dtl_id. Pass it to API 3 as ai_tech_dtl_id and to API 4 as detail_id.
7. API 3 uses multipart/form-data because supporting documents are uploaded as files.
8. API 4 uses application/json for saving payment details.
9. application_type_id must always be 6 for AI Technician.
10. Do not hard-code generated IDs in the application; store and pass the values returned by the current API transaction.
11. For a new payment record, mbbra_appl_pay_id is 0 in the supplied example.
12. For a new document record, ai_tech_doc_id is 0 in the supplied example.
